

# Warners' Wood

It took us 20 minutes to walk to the site.

It was extremely muddy!

It was beautiful being surrounded by the countryside.

Mrs. Warner and her team have planted 40,000 trees.

These are called ridings where  
wildlife can be found.

This area is an archaeological site.  
We found pieces of pottery here.

We examined the different types of trees. We are going to find out what types of trees they have planted.

This area is especially for Thrussington Primary School, for us to develop.

We wanted to know which way  
was North!

Looking at the BIG sky and cloud watching.

We are looking forward to seeing the site develop over time.

Warners' wood will be a bio-diverse wood planted with native species, locally grown but excluding ash. The design of the wood will incorporate two riverside fields which will be wetland woodland and include wide rides leading down to the River Wreake, providing an ideal habitat for bats.

Consideration has also been given to birdlife including provision of wide margins for hunting birds and a high proportion of shrubs to support a wide diversity of bird life. There will be open spaces providing habitat for future wildflower meadows and, of course the archaeological interest on the site.

# What we would like to do....

1. Get a map of the site.
2. Identify the trees planted.
3. Plant our own tree with a plaque.
4. Plant a wild flower meadow.
5. Create kit bags - bird watching and insect identification.
